

Runtime feedback with the board in it — wh_chain120_solve_h200: the table as solved, as executed, and how far the board slid from the plan, round by round

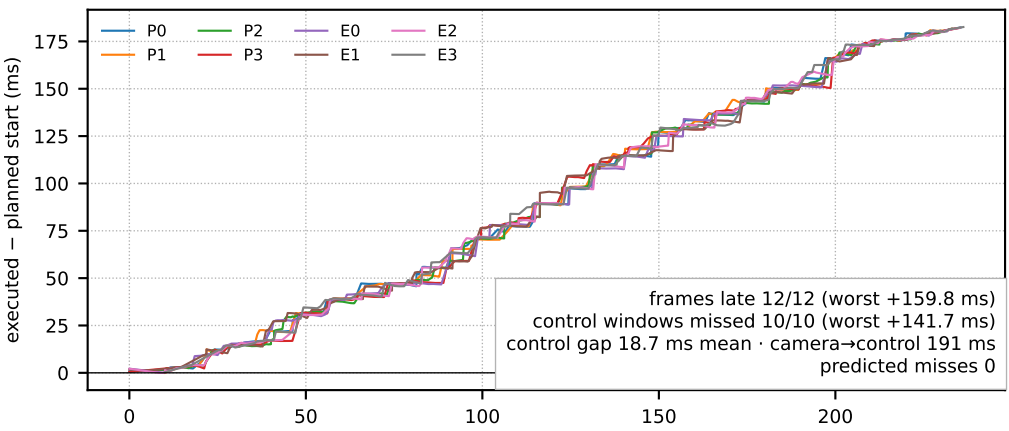

round 0 · cpsat hard · solved on the isolated profile

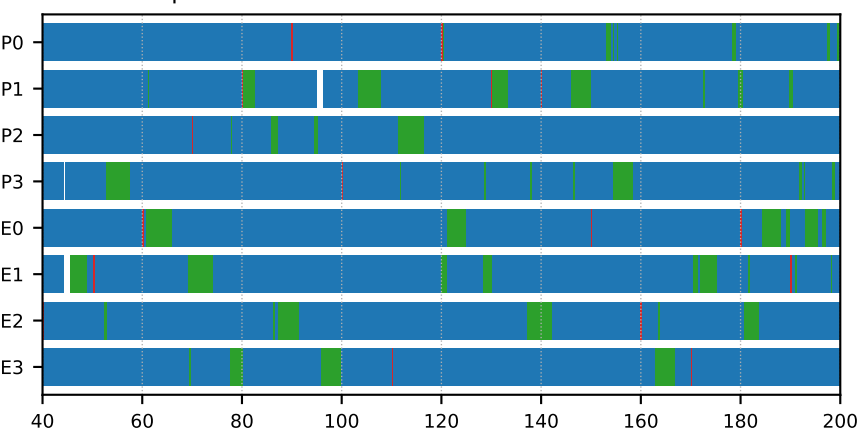

round 0 · executed on the K1 (run 1)

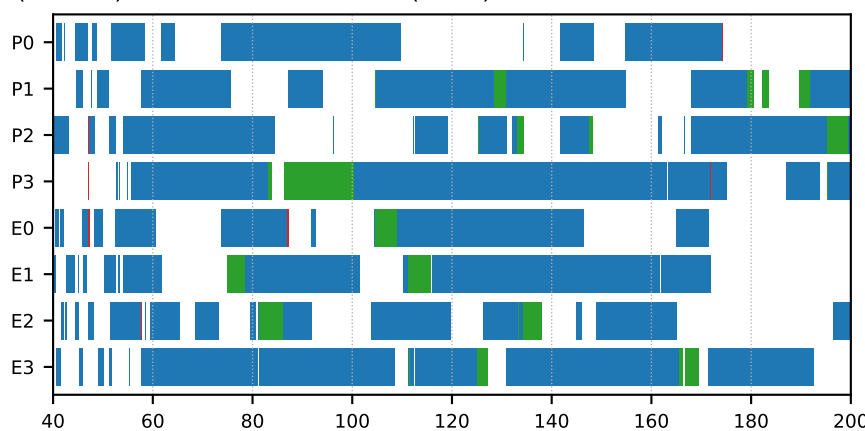

timeline drift per hart

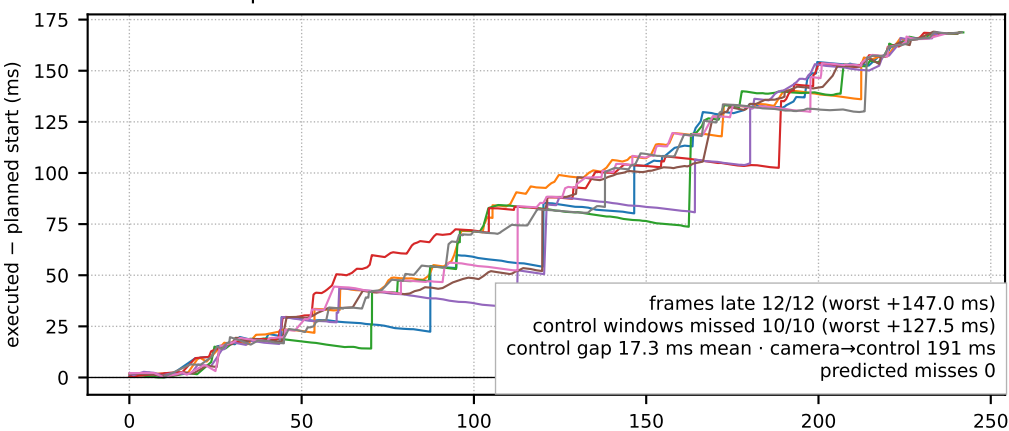

round 1 · cpsat hard · solved on the service-time calibration from round 0 (x1.06)

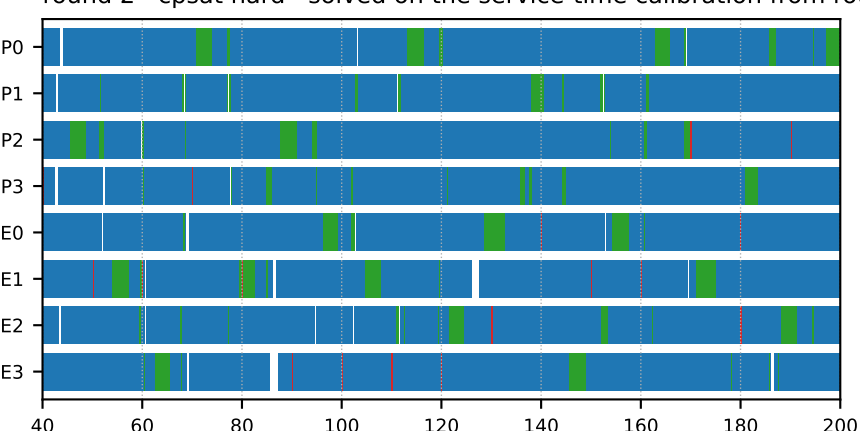

round 1 · executed on the K1 (run 1)

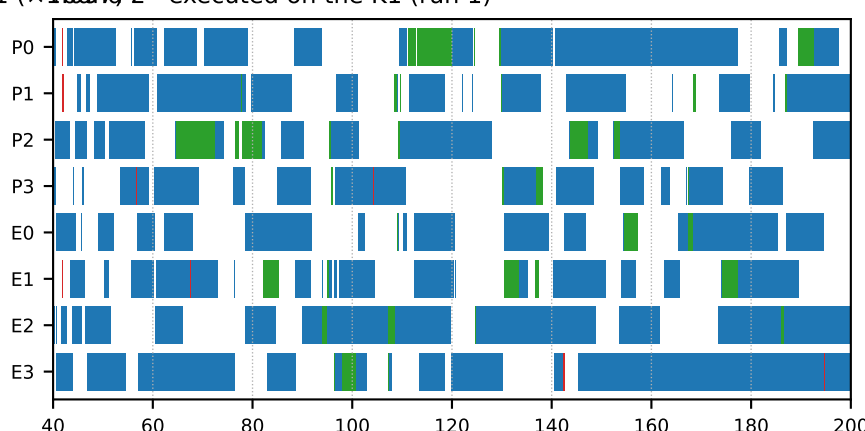

timeline drift per hart

round 2 · cpsat hard · solved on the service-time calibration from round 1 (x1.07)

round 2 · executed on the K1 (run 1)

timeline drift per hart
