

The submitted showdown's own numbers, re-costed from the board's ROS 2 traces

same recurrence, same spec (22 ms period, 5 instances, 23 ms budget); only the per-node costs change. The pinned baseline misses the budget on every input; the margin halves.

the submitted metric: one perception frame at a 22 ms period

the recurrence falls behind each frame

the control-rate label: what was printed vs predicted vs measured
