

Warehouse gate-course showdown — same scene, drone and gain, at 1.4 m/s
XPU-RT · solver-placed CP-SAT schedule, conv on the IME (103 Hz control) clears all 4 gates
ROS 2 · default deployment, unpinned, control chained to the goal (39 Hz control) clears G1 → hits a crate
one seed of this scene (seed 1007); over its 12 seeds XPU-RT completes 4, ROS 2 none

A

B Control-rate envelope (rate injected, 300 flights): success against control rate — ROS 2's 39 Hz and XPU-RT's 103 Hz marked

C Generalization: unseen gates (course B)

D Mechanism: the baseline thrashes (n=6 flights/arm)

a ROS 2 39 Hz · clears G1 · t=2.7s

b ROS 2 39 Hz · hits crate after G1 · t=4.4s

c XPU-RT 103 Hz · clears crate 0.62 m · t=7.0s

d XPU-RT 103 Hz · reaches gate · t=10.9s

E Inside the pair — body rate: the baseline thrashes at 39 Hz

F Nav goal heading: the two commands diverge before the baseline's collision

G Forward speed: the same cruise until the baseline's collision

H XPU-RT's velocity through the gates (arrow = heading · speed, colour = time)

I Onboard K1 schedule, measured at the 45 Hz camera — XPU-RT · solver-placed CP-SAT schedule, conv on the IME places the kernels over all 8 harts: camera→control 27 ms, control every 9.9 ms, every frame on time · YOLO on 8 harts, control on 8 harts, nav on 8 harts
ROS 2 (4 processes · single executor · chained control · unpinned): camera→control 242 ms, control every 26.0 ms, 760/766 frames late · YOLO on 4 harts, nav on 1 hart, control on 1 hart
