

Same scene and drone, 1.0 m/s: XPU-RT (96 Hz control) clears the course, ROS 2 (39 Hz) clears G1 and hits a crate

a ROS 2, $t = 3.5$ s: clears G1

b ROS 2, $t = 9.5$ s: hits crate after G1

B Breaking point (1.7 m scene, cadence + latency replayed)

c XPU-RT, $t = 4.3$ s: clears crate 0.75 m

C Camera rate on the K1: latency, frames delivered

d XPU-RT, $t = 15.3$ s: reaches gate

Second scene, 1.4 m/s: every flight, 12 per arm bold = the pair: ROS 2 clears G2, hits a gate frame

Same seed, 1.7 m scene:
F XPU-RT further on 120 pairs, ROS 2 on 21, tied 27

G Inside the pair of A: the baseline thrashes

D Schedules measured on the K1: 45 Hz camera, 100 ms window, 8 harts per row YOLO orange · nav purple, 22 ms windows shaded · control green, 10 ms windows

E Where the latency goes (45 Hz camera, medians)
