

Warehouse gate-course showdown — same scene and drone, gain, at 1.2 m/s
XPU-RT · greedy on measured costs (100 Hz control) clears all 4 gates
ROS 2 on all 8 cores (36 Hz control) clears G1 → hits a gate frame
one seed of this scene (seed 1000); over its 12 seeds XPU-RT completes 6 and ROS 2 1

I Onboard K1 schedule, measured at the 36 Hz camera — XPU-RT · greedy on measured costs places the kernels over all 8 harts: camera→control 30 ms, control every 10.0 ms, every frame on time · YOLO on 4 harts, nav on 2 harts, control on 1 hart
ROS 2 · all 8 cores (5 processes · single executor · chained control · unpinned): camera→control 32 ms, control every 27.8 ms, 0/352 frames late · YOLO on 4 harts, nav on 1 hart, control on 1 hart
