

Feedback expands the attainable schedule—not just the solver search
Same 100 ms work: 5 MLP + 5 fused-control + 3 DroNet + 1 FFN jobs (178 dispatches); the cycle repeats exactly.

A Original implementation graph — global optimum = 8.001 ms

B After XPU-RT → ModelBlaster feedback — global optimum = 4.891 ms

Time in the exact repeating cycle (ms)

bar height = physical harts reserved by that dispatch

C Certified global optima

D 10 complete K1 runs per phase (SCHED_FIFO)
