

Warehouse gate-course showdown — same aisle, same obstacles: XPU-RT clears all 4 gates, ROS crashes just past gate 1

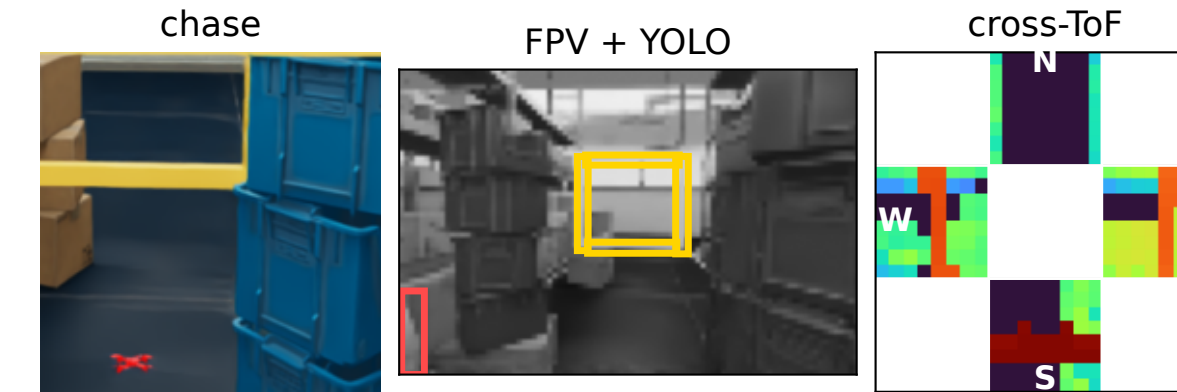

1. ROS · clears gate G1 · t=2.5s

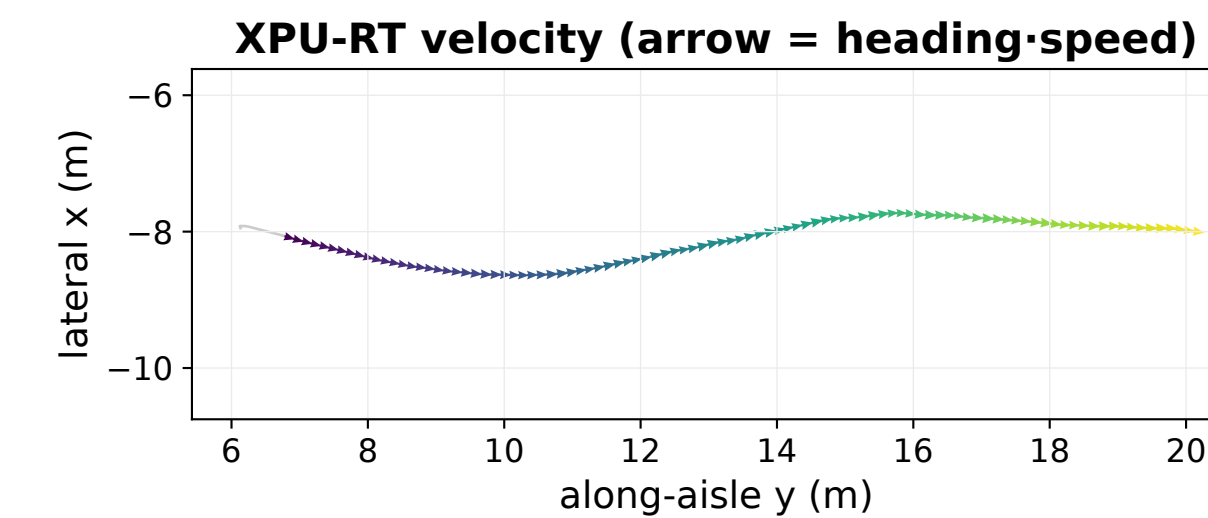

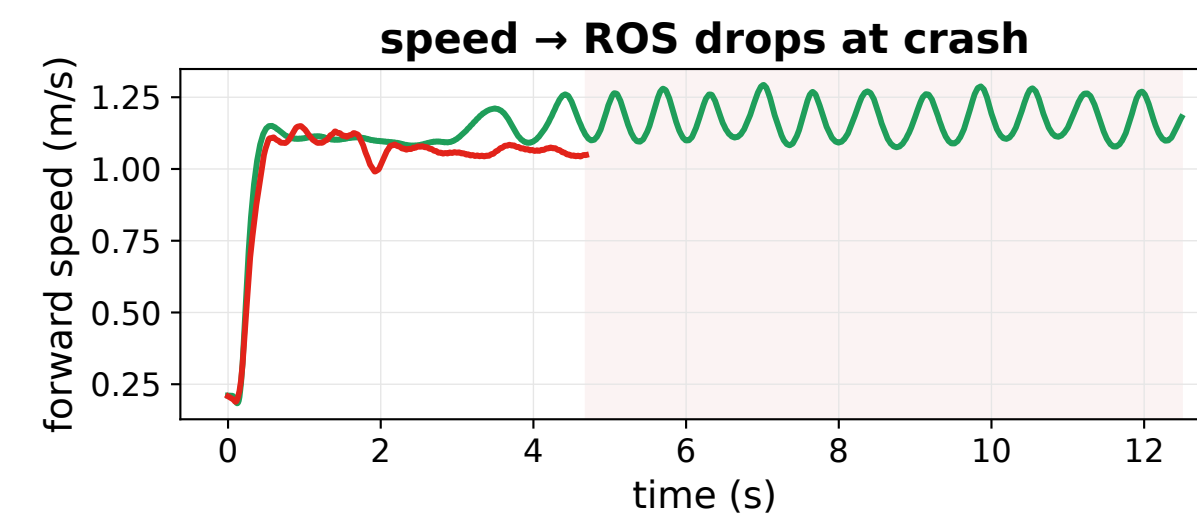

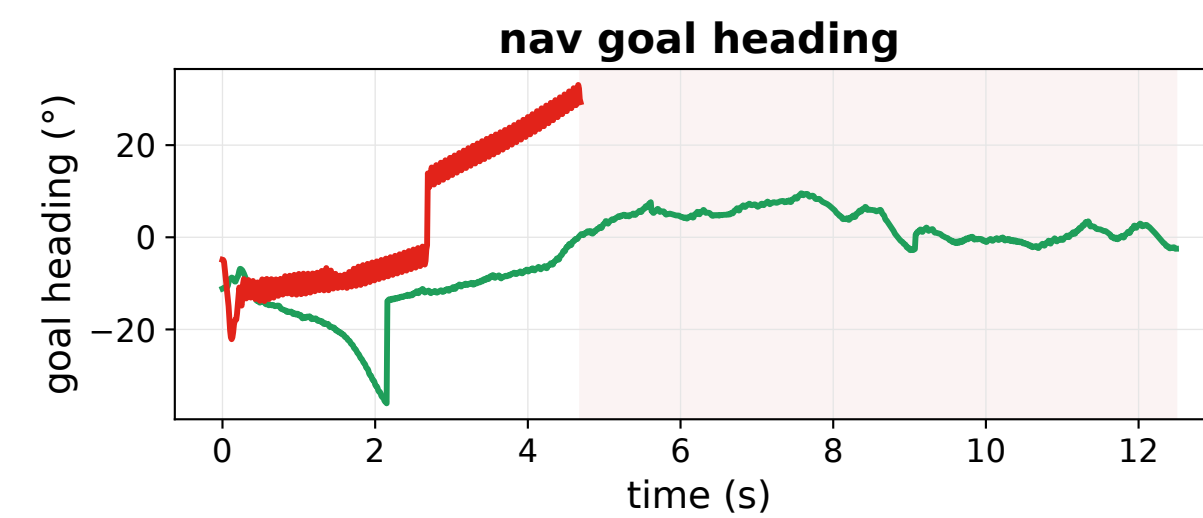

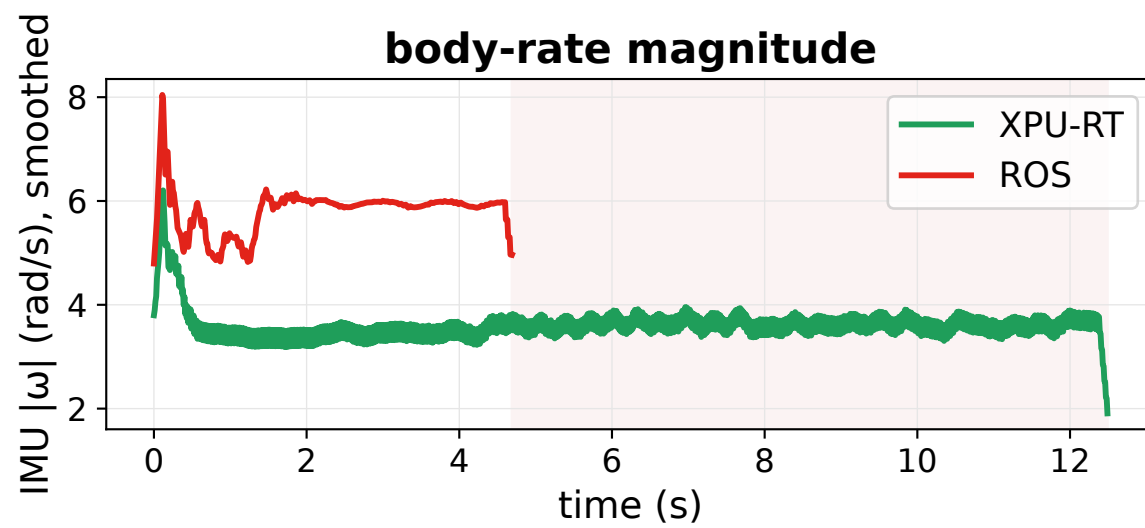

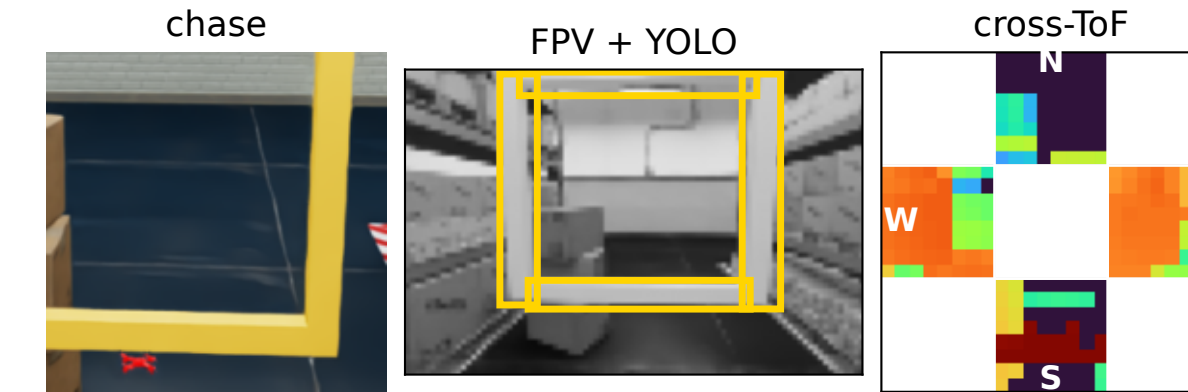

2. ROS · crashes into crate · t=4.7s

3. XPU-RT · gate G3 · t=9.8s

4. XPU-RT · gate G4 + person · t=11.8s

Combined onboard K1 schedule — XPU-RT balances 8 cores and fits the frame; ROS pins 6 cores, serial YOLO overruns → backlog → crash
